

## A0240 ZONE AMPLIFIER

- 80 Watts RMS, 40 Watts / Ch
- Compact size class D
- Audio-sensing power shut off to conserve energy
- Internal switching transformer 100~240 V RoHS, UL, FCC, C-tic, CE approved

The 80 Watt Audio Amplifier offers in-room amplification for any system. A stand-alone unit that connects to a power outlet, the A0240 supports a variety of uses. ideal for powering speakers in hard to wire and retrofit locations.

Use it to boost power on existing low powered distributed audio systems or to easily add a zone to an existing system. It can also easily power a system subwoofer with dedicated 80 watts amplification

- Global & Zone Inputs
- THD < 0.2%

Our highest end and most powerful multi room audio amplifier that is more than anyone would need for superb audio listening pleasure. Loud enough for a party along with the lowest distortion available for a clean and clear music experience.

## CHANNEL VISION™

The WA-320 1-to-1 Wireless Audio Transmitter and WA-360 1-to-1 Wireless Audio Receiver make it possible to create a distributed audio system without running wires from one room to another. The WA-320 can accept either line level of speaker level audio, making it easy to distribute signals to the rear speakers of a surround sound system. The transmitter and receiver link together on a 1-to-1 basis and can operate over 8 different transmission channels. This allows up to 8 independent stereo audio streams to be distributed in one home.

- Wirelessly transmits audio up to 300ft.
- Line-level and Speaker-level inputs (WA-320)
- Standard Line-level audio outputs (WA-360)
- 8 transmission channels
- Easy installation and linking
