

## Helsyn Sub10 Subwoofer

The Helsyn Sub10 Subwoofer is a powerhouse built in a chic designer enclosure which is available in various options to suit any decor. The smooth curved edges and striking round grill gives this product a look of distinction and class.

Inside, the subwoofer features a 10" HiVi Research long excursion woofer with Symmetrical Motor Drive (SMD) technology which makes the voice coil into a symmetrical driving magnetic field, reducing voice coil inductance and back electromotive force modulation, improving controllability of the driver.

The subwoofer has a 600-watt RMS amplifier module which has adjustable volume, frequency and phase control with a massive external heat sink. It also has auto power on / off.
