

Stunning Looks

Finally there is an option for putting a television in a wet area which looks good. Our range of stylish waterproof liquid crystal flat screens fills a void which once existed in choice allowing you to create the ideal environment you have always imagined.

Be it in a bathroom, kitchen, laundry or outside, our screens allow you to watch in style and comfort without the worry of water getting near your electronics. Our screens can be mounted on the wall or even flush in the wall if you prefer.

Perhaps one of the best things is the finish available, with screens in mirror polished stainless steel or optional finishes by special order. You can even browse the internet on our screens with the VGA input through your standard computer.
